EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

Replace page 22 of the specification with the page attached herewith in Appendix.

Note: In the Specification, page 22, the structures to the right side of the page were incomplete or contained missing text. In the response filed on February 1, 2008 applicant provided an amendment to replace Scheme I and the accompanying structures (see page 2 of the response), however, the provided replacement Scheme also contained partial structures and/or missing text. A replacement page 22 is provided herewith which contains full structures and text consistent with US 2006/0293303 (the PG Publication of the application).

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The provisional obviousness-type double patenting rejection over the copending application S. No. 10/548,154 of the previous office action is withdrawn because the instant claim 21 no longer contains a pyrimidinyl ring attached to the bicyclic core. Further, in the reference claims, the pyrimidine is always substituted with an amino group at the 2-position, as compared to the instant claims which do not have such a substituent at the analogous position.

The references of record do not teach or fairly suggest the instantly claimed compounds, see for example, U.S. 6,596,731.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4-fluorophenacyl chloride reacts with *O*-methylhydroxylamine hydrochloride and forms *O*-methylloxime 30 when heated for about two hours in solvents such as methanol to about 60°C. Stirring a solution of *N*-protected pyridyl piperidine 33 with the *O*-methylloxime 30 in solvents such as acetone until pyridinyl salt formation is almost complete followed by evaporation, dissolving obtained residue in methanol and heating the resulting solution in the presence of a base such as potassium *tert*-butoxide forms imidazopyridine 34. Heating a solution of 34 in acetic anhydride in the presence of several drops of sulfuric acid for about 48 hours gives the ketone 45. Treatment of ketone 45 dissolved in DMF-DMA and heating to about 100°C for
